			2008- 2010	2011- 2016
A. To halt population decline of the grey partridge, skylark, tree sparrow, corn bunting, turtle dove, linnet, yellow wagtail, reed bunting, and yellow hammer.	2020	In progress. Breeding and wintering data since 2009 for 6 farms (from 100ha to 700ha) for 19 species shows the populations to be stable and rising, with the highest densities of skylark and tree sparrow in the country. Warwickshire has good residual populations owing to recording effort, diverse landscape (ponds, trees in hedgerows) and mixed farming.	\leftrightarrow	↑
B. To aim for no further loss of range of grey partridge, skylark, tree sparrow, corn bunting, turtle dove, linnet, yellow wagtail, reed bunting, and yellow hammer.	2020	In progress through Natural England's new 'Wild Pollinator and Farm Wildlife Package', also by Campaign for the Farmed Environment (CFE) Farmland Bird event.
